WASTE TO HEALTH : THE ABSORPTION OF CARBON DIOXIDE BY COCKLE SHELLS

Group Members:
Najihah Mazlan (Bachelor of Science in Applied Chemistry Hons.)
Muhammad Izzat Hazim (Bachelor of Engineering in Petroleum Engineering Hons.)

The project starts with our determination to benefit waste material for environmental use. For the environmental issue, we have identified a small but significant practice in Malaysia, hazardous gases. Hazardous gas such as CO₂ has been a prolongs issue that is affecting our health without realizing it. Since this is affecting the peoples surrounding here, we thought about the feasibility of 'neutralizing' it, by incorporating unused material in lessening the issue. For that, we came out to make use of cockle shells and eggshell, wasted material containing a high level of calcium carbonate to aid in neutralizing the CO₂ gas. That is where our project title comes from, "Waste to Health".

PROBLEM STATEMENTS

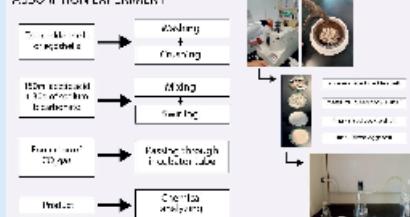

- 1) Hazardous gas released from the smoke, waste or industrial activity may affect our health.
- 2) A lot of cockle shells waste had been dumped and left untreated around the muddy coastal in Malaysia.
- 3) Low air quality may lead to bad health condition.
- 4) High intensity of CO₂ may lead to green house effect and acid rain.

OBJECTIVES

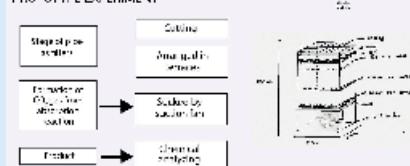

1. To Investigate the air quality before and after applying the cockle shell
2. To investigate the effectiveness of the product
3. To evaluate the economical value of the product

METHODOLOGY

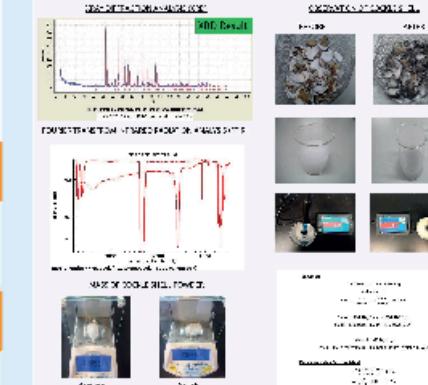

ABSORPTION EXPERIMENT

PROTOTYPING EXPERIMENT

RESULTS & DISCUSSIONS

ECONOMIC CONSIDERATIONS

Cost consideration		Alternative consideration	
Raw material	Low cost	Raw material	High cost
Processing	Medium cost	Processing	Medium cost
Transportation	Medium cost	Transportation	Medium cost
Total cost	Medium cost	Total cost	Medium cost

CONCLUSIONS

- 1) The effectiveness of the cockle shell as an absorbent is very efficient.
- 2) Creating and producing more affordable and environmental friendly air filter by using waste products into something more beneficial.
- 3) Giving the idea of how can we handle greenhouse gases problem in the future with a safer and cheaper way.
- 4) Low quality of air can affect our health.

RECOMMENDATIONS

- DESIGN : Produce a better design to attract consumer to buy our product
- FUNCTION : Instead of focus on filtering the air only, we can add on some other function which release some fresh and fragrant air
- MATERIALS : Use better material to make sure the filter works fine such as the usage of cotton gauze
